WARNING

Risk of electric shock!

1. Incorrect repairs are dangerous. Repairs may only be carried out and damaged power cables replaced by one of our trained after-sales technicians. If the appliance is defective, unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the aftersales service.
2. The cable insulation on electrical appliances may melt when touching hot parts of the appliance. Never bring electrical appliance cables into contact with hot parts of the appliance.
3. Do not use any high-pressure cleaners or steam cleaners, which can result in an electric shock.
4. A defective appliance may cause electric shock. Never switch on a defective appliance. Unplug the appliance from the mains or switch off the circuit breaker in the fuse box. Contact the after-sales service.

Risk of burns!

1. The appliance becomes very hot. Never touch the interior surfaces of the appliance or the heating elements.
2. Always allow the appliance to cool down.
3. Keep children at a safe distance.
4. Accessories and ovenware become very hot. Always use oven gloves to remove acces sories or ovenware from the cavity.
5. Alcoholic vapors may catch fire in the hot cooking compartment. Never prepare food containing large quantities of drinks with high alcohol content. Only use small quanti ties of drinks with high alcohol content. Open the appliance door with care.

Risk of scalding!

1. The accessible parts become hot during operation. Never touch the hot parts. Keep children at a safe distance.
2. When you open the appliance door, hot steam can escape. Steam may not be visible, depending on its temperature. When opening, do not stand too close to the appli- ance. Open the appliance door carefully. Keep children away.
3. Water in a hot cavity may create hot steam. Never pour water into the hot cavity.

Risk of injury!

1. Scratched glass in the appliance door may develop into a crack. Do not use a glass scraper, sharp or abrasive cleaning aids or detergents.
2. The hinges on the appliance door move when opening and closing the door, and you may be trapped. Keep your hands away from the hinges.

Risk of fire!

1. Combustible items stored in the cavity may catch fire. Never store combustible items in the cavity. Never open the appliance door if there is smoke inside. Switch off the appliance and unplug it from the mains or switch off the circuit breaker in the fuse box.
2. A draught is created when the appliance door is opened. Greaseproof paper may come into contact with the heating element and catch fire. Do not place greaseproof paper loosely over accessories during preheating. Always weight down the greaseproof paper with a dish or a baking tin. Only cover the surface required with greaseproof paper. Greaseproof paper must not protrude over the accessories.

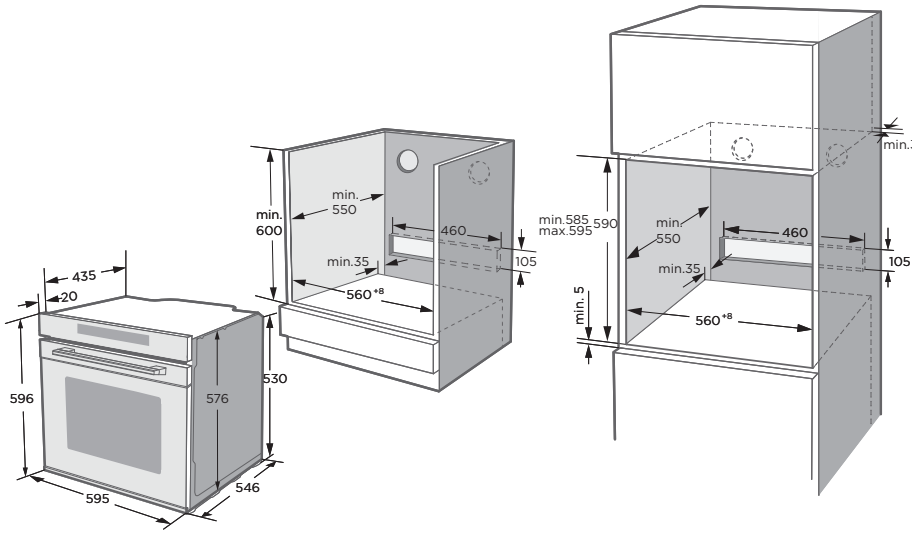

Hazard due to magnetism!

Permanent magnets are used in the control panel or in the control elements. They may affect electronic implants, e.g. heart pacemakers or insulin pumps. Wearers of electronic implants must stay at least 10 cm away from the control panel.

Causes of Damage

1. Accessories, foil, greaseproof paper or ovenware on the cavity floor: do not place accessories on the cavity floor. Do not cover the cavity floor with any sort of foil or greaseproof paper. Do not place ovenware on the cavity floor if a temperature of over 50 ºC has been set. This will cause heat to accumulate. The enamel will be damaged.
2. Aluminum foil: Aluminum foil in the cavity must not come into contact with the door glass. This could cause permanent discoloration of the door glass.
3. Silicone pans: Do not use any silicone pans, or any mats, covers or accessories that contain silicone. The oven sensor may be damaged.
4. Water in a hot cooking compartment: do not pour water into the cavity when it is hot. This will cause steam. The temperature change can cause damage to the enamel.
5. Moisture in the cavity: Over an extended period of time, moisture in the cavity may lead to corrosion. Allow the appliance to dry after use. Do not keep moist food in the closed cavity for extended periods of time. Do not store food in the cavity.
6. Cooling with the appliance door open: Following operation at high temperatures, only allow the appliance to cool down with the door closed. Do not trap anything in the appliance door. Even if the door is only left open a crack, the front of nearby furniture may become damaged over time. Only leave the appliance to dry with the door open if a lot of moisture was produced while the oven was operating.
7. Fruit juice: when baking particularly juicy fruit pies, do not pack the baking tray too generously. Fruit juice dripping from the baking tray leaves stains that cannot be removed. If possible, use the deeper universal pan.
8. Extremely dirty seal: If the seal is very dirty, the appliance door will no longer close properly during operation. The fronts of adjacent units could be damaged. Always keep the seal clean.
9. Appliance door as a seat, shelf or worktop: Do not sit on the appliance door or place or hang anything on it. Do not place any cookware or accessories on the appliance door.
10. Inserting accessories: depending on the appliance model, accessories can scratch the door panel when closing the appliance door. Always insert the accessories into the cavity as far as they will go.
11. Carrying the appliance: do not carry or hold the appliance by the door handle. The door handle cannot support the weight of the appliance and could break.
12. If you use the residual heat of the switched off oven to keep food warm, a high moisture content inside the cavity can occur. This may lead to condensation and can cause corrosion damage of your high quality appliance as well as harm your kitchen. Avoid condensation by opening the door or use “Defrost” mode.

INSTALLATION

To operate this appliance safe , please be sure that it has been installed to a professional standard respecting the installation instructions . Damages occur because of incorrect installation are not within the warranty.

While doing the installation , please wear protective gloves to prevent yourself from getting cut by sharp edges .

Check the appliance if there is any damage before installation and do not connect the appliance if there is .

Before turning on the appliance , please clean up all the packaging materials and adhesive film from the appliance.

The dimensions attached are in mm.

It is necessary to have the plug accessible or incorporate a switch in the fixed wiring, in order to disconnect the appliance from the supply after installation when necessary.

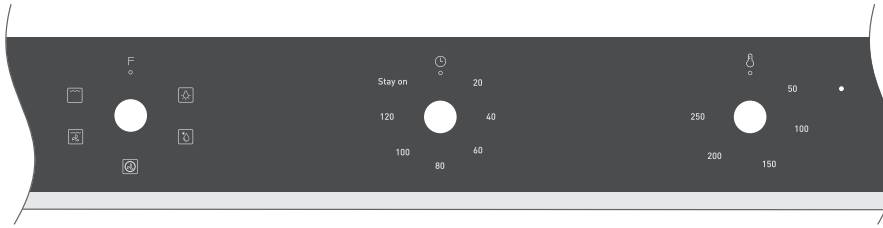

Warning: The appliance must not be installed behind a decorative door in order to avoid overheating.

KNOW YOUR APPLIANCE

IDENTIFYING THE APPLIANCE

In this chapter, we will explain the control panel and accessories. At the same time you will also find out about the various functions of your appliance.
Note: Depending on the appliance model, individual details and colors may different.

CONTROL PANEL

Knobs

Turn these knobs to set operating mode, each knob is well fitted with the nearby silk-screening icons on the control panel glass so that you can easily operate your appliance with your fingers.

Indicator light

Indicator is sort of a light that notice you if heaters inside the appliance are working or not, while the appliance is switched on, the indicator will be on and off intermittently.

Controls

The individual controls are adapted for the various functions of your appliance. You can set your appliance simply and directly. There is no constraint for the orders of operating the knobs, making your-self fully free while using the appliance.
→**"Operate Your Appliance" on page 11**

OPERATING MODES

Your appliance has various operating modes which make your appliance easier to use. To enable you to find the correct type of heating for your dish, we have explained the differences and scopes of application here.
The symbols for each type help you to remember them.

Types of heating

Heating Mode		Temperature	Use
	Lamp	/	For lightening the cavity without any heating element switch on.
	Defrost	/	For gently defrosting frozen food.
	Grill	50°C~250°C	For grilling small amounts of steaks or sausages. The center area under the heating heating element becomes hot
	Grill + Fan	50°C~250°C	For baking and roasting on one or more levels.(But no more than 3) The fan distributes heat from heating elements evenly around the cavity.
	Convection	50°C~250°C	For baking and roasting on one or more levels. Heat comes from the ring heater surrounding the fan evenly.

Notes

1. To defrost big portions of food, it is possible to remove the side-racks and place the container on the cavity floor.
2. To warming tableware, it is beneficial to remove the side-racks and the heating modes “Hot Air Grilling” and “Fan Heating” with temperature setting of 50°C are useful. “Hot Air Grilling” should be used, if more than half of the cavity floor is covered by the tableware.
3. Due to an optimum evenness of heat distribution inside the cavity during “Fan Heating”, the fan will work at certain times of the heating process, to guaranty the best possible performance.

Caution

1. If you open the appliance door during an on-going operation, the operation will not be paused. Please be especially careful with the risk of burns.
2. Do not cover the ventilation slots. Otherwise, the appliance may overhea.
   To make the appliance cools down more quickly after the operation, the cooling fan may continue to run for a period afterwards.

Lighting

When you switch the appliance on to any mode, the lamp will be always on until the operation has finished. You can use the main mode: “Lamp” during different operations, i.e. cleaning, preparing the cooking process, pause heating modes during opening the door.

Cooling fan

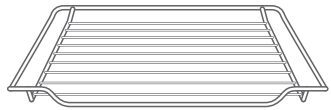

The cooling fan switches on and off as required. The hot air escapes above the door.

ACCESSORIES

Your appliance is accompanied by a range of accessories. Here, you can find an overview of the accessories included and information on how to use them correctly.

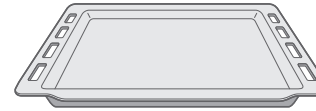

Accessories included

Your appliance is equipped with the following accessories:

Wire Rack

For ovenware, cake tins and ovenproof dishes. For roasts and grilled food

Baking Tray

For tray bakes and small baked products.

You can use the tray to place liquid or cooking food with juice.
Only use original accessories. They are specially adapted for your appliance.
You can buy accessories from the after-sales service, from specialist retailers or online.

Note

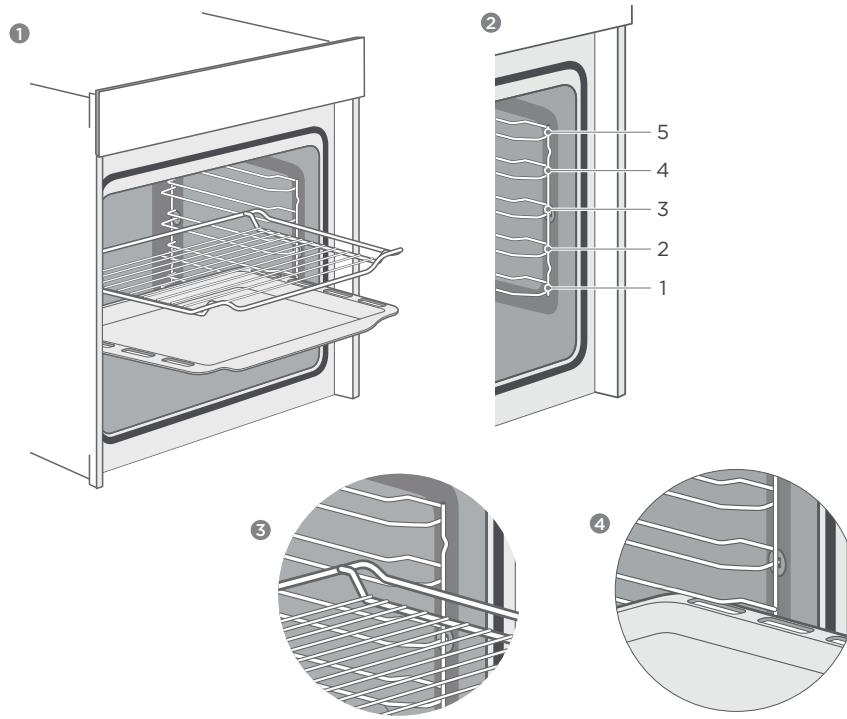

The accessories may deform when they become hot. This does not affect their function. Once they have cooled down again, they regain their original shape.

Inserting accessories

The cavity has five shelf positions. The shelf positions are counted from the bottom up. The accessories can be pulled out approximately halfway without tipping.

Notes

1. Ensure that you always insert the accessories into the cavity the right way round.
2. Always insert the accessories fully into the cavity so that they do not touch the appliance door.

Locking function

Accessories can be approximately pulled halfway out until they lock in place. The locking function prevents accessories from tilting with the gravity of food and accessories themselves while they get pulled out. Accessories should be inserted into cavity correctly for the tilt protection.When inserting the wire rack, ensure the wire rack is onto the right facing direction like the picture ❶❸

When inserting the backing tray, ensure the backing tray is onto the right facing direction like the picture ❶❹.

Optional accessories

You can buy optional accessories from the after-sales service, from specialist retailers or online. Please see your sales brochures for more details.
When purchasing, please always quote the exact order number of the optional accessory.

OPERATE YOUR APPLIANCE

First use

Before using the appliance to prepare food for the first time, you must clean the cavity and accessories.

1. Remove all stickers, surface protection foils and transport protection parts.
2. Remove all accessories and the side-racks from the cavity.
3. Clean the accessories and the side-racks thoroughly using soapy water and a dish cloth or soft brush.
4. Ensure that the cavity does not contain any leftover packaging, such as polystyrene pellets or wooden piece which may cause risk of fire.
5. Wipe the smooth surfaces in the cavity and the door with a soft, wet cloth.
6. To remove the new-appliance smell, heat up the appliance when empty and with the oven door closed.
7. Keep the kitchen highly ventilated while the appliance is heating up first time. Keep children and pets out of the kitchen during this time. Close the door to the adjacent rooms.
8. Adjust the settings indicated. You can find out how to set the heating type and the temperature in the next section.

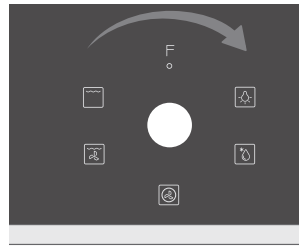

Settings	
Heating Mode	
Temperature	250°C
Time	1h

After the appliance has cooled down:

1. Clean the smooth surfaces and the door with soapy water and a dish cloth.
2. Dry all surfaces.
3. Install the side-racks.

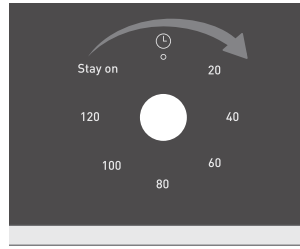

Selecting Modes

The default operating mode is switching off. If you would like to select a cooking operating mode, you can do so using left mode-control knob. There is a pointer on the knob, turn this knob to make the pointer to point to the mode which you would like to choose.

Temperature Setting

If you would like to select a temperature for cooking, the way to operate is similar with the way to select the operating mode. You can do so using right temperature-control knob. There is a pointer on the knob, turn this knob to make the pointer to point to the temperature which you would like to choose.

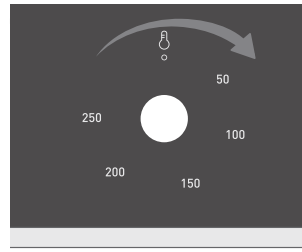

Switching On

As now you already finished the setting of the operating mode and temperature. If you would like to turn the appliance on, you can do so using time-control knob. There is a pointer on the knob, turn this knob to make the pointer to point to the cooking time which you would like to choose. The maximum cooking time is 2 hours.

Note

For this appliance, to finish the setting of cooking time means to operate the appliance started.
Since the second that you turn the knob away from the original position, the appliance will start to work.

If you turn the time-control knob anti-clockwise, the gear that the knob will arrive is STAY ON, which means the oven will work continuously without timer controlling. Only use this when the appliance is well supervised by a person responsible for safety who is well aware of how to use the appliance safely and have understood the associated hazards.
After the appliance starts to be operated, the time-control knob will slightly and continuously turn anti-clockwise (except STAY ON), when the cooking has finished, the pointer will turn back to the original position and you will hear a clear tinkle of bell to notice you.

Indicator

While the appliance starts to cook food or drink, the indicator will be switched on to notice you . During the period of cooking, the indicator will be on & off intermittently. This depends on if the heating elements are working or not.

Changing

During the period of appliance operating, knobs on the control panel can be turned again to meet your needs or changing.
Turn the mode-control knob from the present mode to another one while the appliance is operating means to get the mode changed while food is being cooked. By this time, if you turn the knob to LAMP or DEFROST, the heating elements will be switched off. If you turn the knob back to the original position, the appliance will be switched off but the timer will still count.

Turn the temperature-control knob from present to others while the appliance is operating means to get the cooking temperature changed while food is being cooked. By this time, if you turn the knob back to the original position, the heating elements will be switched off. Lamp and timer will still be switched on, if cooking fan works depends on the temperature of the circumstance inside the appliance.
Turn the time-control knob from present to others while the appliance is operating means to get the rest cooking time changed while food is being cooked. By this time, if you turn the knob back to the original position, it means the appliance is officially switched off. You will see the indicator also be switched off to notice you about this.

Caution!

After the appliance switched off, it becomes very hot especially inside the cavity. Never touch the interior surfaces of the appliance or the heating elements. Use oven gloves to remove accessories or ovenware from the cavity, and allow the appliance to cool down. Keep children at a safe distance at the same time to avoid the injury of burns.

Note

Changing modes/temperature/rest cooking time may have some negative influences for the result of cooking, we warmly recommend you not to do so unless you are well experienced on cooking.

ENERGY EFFICIENT USE

1. Remove all accessories, which are not necessary during the cooking & baking process
2. Do not open the door during the cooking & baking process.
3. If you open the door during cooking & baking, switch the mode to “Lamp” (Without change the temperature setting).
4. Decrease the temperature setting in not fan assisted modes to 50°C at 5min to 10min before end of cooking & baking time. So you can use the cavity heat to complete the process.
5. Use “Fan Heating”, whenever possible. You can reduce the temperature by 20°C to 30°C.
6. You can cook and bake using “Fan Heating” on more than one level at the same time.
7. If it is not possible to cook and bake different dishes at the same time, you can heat one after the other to use the preheat status of the oven.
8. Do not preheat the empty oven, if it is not required.
   If necessary put the food into the oven immediately after reaching the temperature indicated by switching off the indicator light the first time.
9. Do not use reflective foil, like aluminum foil to cover the cavity floor.
10. Use the timer and or a temperature probe whenever possible.
11. Use dark matt finish and light weighted baking molds and containers. Try not to use heavy accessories with shiny surfaces, like stainless steel or aluminum.

ENVIRONMENT

The packaging is made for protect your new appliance against damages during transport. The materials used are selected carefully and should be recycled. Recycling reduces the use of raw materials and waste. Electrical and electronic appliances often contain valuable materials. Please do not dispose of it with your household waste.

HEALTH

Acrylamide occurs mainly by heating up starchy food (i.e. potato, French fries, bread) to very high temperatures over long times.

Tips

1. Use short cooking times.
2. Cook food to a golden yellow surface color, do not burn it to dark brown colors.
3. Bigger portions have less acrylamide.
4. Use “Fan Heating” mode if possible.
5. French fries: Use more than 450g per tray, place them evenly spread and turn them time by time. Use the product information if available to get the best cooking result.

MAINTENANCE YOUR APPLIANCE

Cleaning Agent

With good care and cleaning, your appliance will retain its appearance and remain fully functioning for a long time to come. We will explain here how you should correctly care for and clean your appliance.
To ensure that the different surfaces are not damaged by using the wrong cleaning agent, observe the information in the table. Depending on the appliance model, not all of the areas listed may be on/in your appliance.

Caution!
Risk of surface damage

Do not use:

1. Harsh or abrasive cleaning agents.
2. Cleaning agents with a high alcohol content.
3. Hard scouring pads or cleaning sponges.
4. High-pressure cleaners or steam cleaners.
5. Special cleaners for cleaning the appliance while it is hot.

Wash new sponge cloths thoroughly before use.

Tip

Highly recommended cleaning and care products can be purchased through theafter-sales service.
Observe the respective manufacturer's instructions.

Area Appliance exterior	Cleaning
Appliance exterior Stainless steel front	**Hot soapy water:** Clean with a dish cloth and then dry with a soft cloth. Remove flecks of limescale, grease, starch and albumin (e.g. egg white) immediately. Corrosion can form under such flecks. Special stainless steel cleaning products suitable for hot surfaces are available from our after-sales service or from specialist retailers. Apply a very thin layer of the cleaning product with a soft cloth.
Plastic	**Hot soapy water:** Clean with a dish cloth and then dry with a soft cloth. Do not use glass cleaner or a glass scraper.
Painted surfaces	**Hot soapy water:** Clean with a dish cloth and then dry with a soft cloth.

Notes

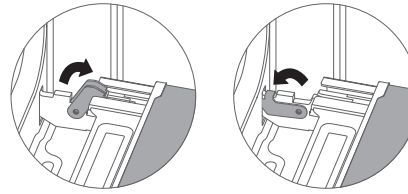

1. Slight differences in color on the front of the appliance are caused by the use of different materials, such as glass, plastic and metal.
2. Shadows on the door panels, which look like streaks, are caused by reflections made by the interior lighting.
3. Enamel is baked on at very high temperatures. This can cause some slight color variation. This is normal and does not affect operation. The edges of thin trays cannot be completely enameled. As a result, these edges can be rough. This does not impair the anti-corrosion protection.
4. Always keep the appliance clean and remove dirt immediately so that stubborn deposits of dirt do not build up.

Tips

1. Clean the cooking compartment after each use. This will ensure that dirt cannot be baked on.
2. Always remove flecks of lime scale, grease, starch and albumin (e.g. egg white) immediately.
3. Remove flecks of food with sugar content immediately, if possible, when the fleck is still warm.
4. Use suitable ovenware for roasting, e.g. a roasting dish.

APPLIANCE DOOR

With good care and cleaning, your appliance will retain its appearance and remain fully functional for a long time to come. This will tell you how to remove the appliance door and clean it.
For cleaning purposes and to remove the door panels, you can detach the appliance door. The appliance door hinges each have a locking lever.
When the locking levers are closed, the appliance door is secured in place. It cannot be detached. When the locking levers are open in order to detach the appliance door, the hinges are locked. They cannot snap shut.

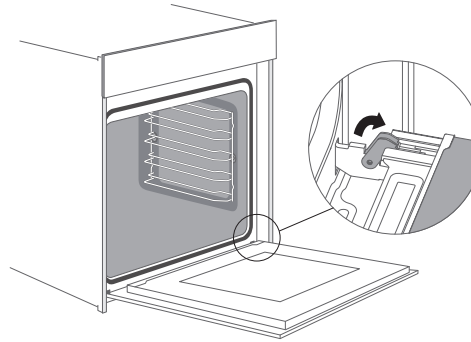

Warning – Risk of injury!

1. If the hinges are not locked, they can snap shut with great force. Ensure that the locking levers are always fully closed or, when detaching the appliance door, fully open.
2. The hinges on the appliance door move when opening and closing the door, and you may be trapped. Keep your hands away from the hinges.

Removing the appliance door

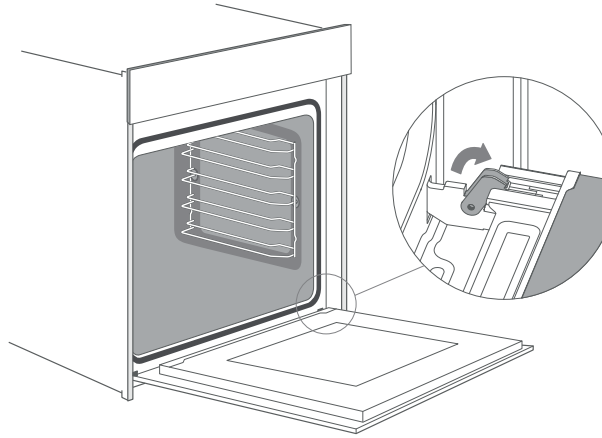

1. Open the appliance door fully.
2. Fold open the two locking levers on the left and right
3. Close the appliance door as far as the limit stop.
4. With both hands, grip the door on the left- and right-hand side, and pull it out upwards.

Fitting the appliance door

Reattach the appliance door in the opposite sequence to removal.

1. When attaching the appliance door, ensure that both hinges are placed right onto the installing holes of the front panel of the cavity.
   Ensure that the hinges are inserted into the correct position. You must be able to insert them easily and without resistance. If you can feel any resistance, check that the hinges are inserted into the holes right.
2. Open the appliance door fully. While opening the appliance door , you can make another check if the hinges areonto the right position . If you make the fitting wrong , you will not be able to make the appliance door fully opened.
   Fold both locking levers closed again.
3. Close the cooking compartment door. By the same time , we warmly recommend you to check one more time , if the door is onto the right position and if the ventilation slots are not half-sealed .

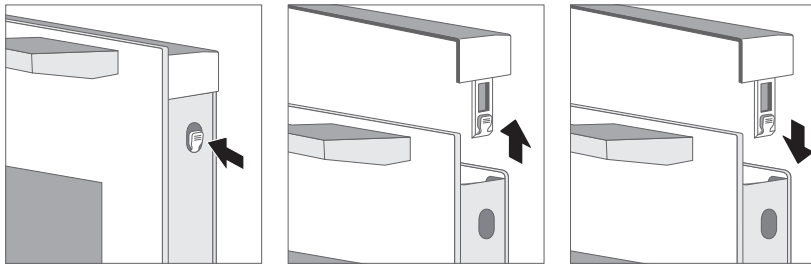

Removing the door cover

The plastic inlay in the door cover may become discolored. To carry out thorough cleaning, you can remove the cover.

Remove the appliance door like instructed above.

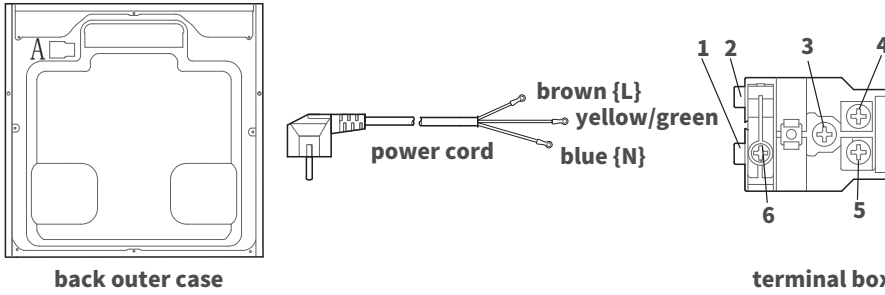

1. Press on the right and left side of the cover.
2. Remove the cover.
3. After removing the door cover , that rest parts of the appliance door can be easily taken off so that you can go on with the cleaning . When the cleaning of the appliance door has finished , put the cover back in place and press on it until it clicks audibly into place.
4. Fitting the appliance door and close it.

c. change the new power cord ,fix the yellow/green wire on 3，brother wire on 4，blue wire on 5.
d. twist screw 6 closed the terminal box cover finish the changing.

back outer case　　terminal box

Caution!

While the appliance door is well installed, the door cover can also be taken off, by this time.

1. Removing the door cover means to set the inner glass of the appliance door free, the glass can be easily moved and cause damage or injury.
2. As removing the door cover and inner glass means to reduce the overall weight of the appliance door. The hinges can be easier to be moved when closing the door and you may be trapped. Keep your hands away from the hinges.

Because of the 2 points above, we strongly recommend you not to remove the door cover unless the appliance door removed. Damage caused by incorrect operation is not covered under warranty.

CURE YOUR APPLIANCE WHEN NEEDED

If a fault occurs, before calling the after-sales service, please ensure that is not because of incorrect operations and refer to the fault table, attempt to correct the fault yourself. You can often easily rectify technical faults on the appliance yourself.

TIPS AND TRICKS

You want to cook your own recipe	Try to use settings of similar recipes first and optimize the cooking process due to the result.
Is the cake baked ready?	Put a wooden stick inside the cake about 10 minutes before the given baking time is reached. If there is no raw dough at the stick after pulling out, the cake is ready.
The cake loses massive volume during cooling down after baking	Try to lower the temperature setting by 10°C and double check the food preparing instructions regarding the mechanical handling of the dough.
The height of the cake is in the middle much higher than at the outer ring	Do not grease the outer ring of the spring form
The cake is too brown at the top	Use a lower shelf level and or use a lower set temperature (this may lead to a longer cooking time)
The cake is too dry	Use a 10°C higher set temperature (this may lead to a shorter cooking time)
The food is good looking but the humidity inside is too high	Use a 10°C lower set temperature (this may lead to a longer cooking time) and double check the recipe
The browning is uneven	Use a 10°C lower set temperature (this may lead to a longer cooking time). Use the “Top & Bottom Heating” mode on one level.
The cake is less browned on the bottom	Choose a level down
Baking on more than one level at the same time: One shelf is darker than the other.	Use a fan assisted mode for baking at more than one level and take out the trays individually when ready. It is not necessary that all trays are ready at the same time.
Condensing water during baking	Steam is part of baking and cooking and moves normally out of the oven together with the cooling air flow. This steam may condensate at different surfaces at the oven or near to the oven and build water droplets. This is a physical process and cannot be avoid completely.

Which kind of baking ware can be used?	Every heat resistant baking ware can be used. It is recommended not to use aluminum in direct contact with food, especially when it is sour. Please ensure a good fitting between container and lid.
How to use the grill function?	Preheat the oven for 5 minutes and place the food in the level given by this manual. Close the oven door when you use any grilling mode. Do not use the oven when the door is open, except for load / remove / check the food.
How to keep clean the oven during grilling ?	Use the tray filled with 2 liter of water in at level 1. Nearly all fluids drip down from the food placed on the rack will captured by the tray.
The heating element in all grilling modes are switching on and off over the time.	It is a normal operation and depends on the temperature setting.
How to calculate the oven settings, when the weight of a roast is not given by a recipe?	Choose the settings next to the roast weight and change the time slightly. Use a meat probe if possible to detect the temperature inside the meat. Place the head of the meat probe carefully in the meat, due to the manufacturer instructions. Make sure, that the head of the probe is placed in the middle of the biggest part of the meat, but not in the near of a bone or hole.
What happens if a fluid is poured to a food in the oven during the baking or cooking process?	The fluid will boil and steam will arise as a normal physical process. Please be careful, because the steam is hot. See also “Condensing water during baking” for more information. If the fluid contains alcohol, the boiling process will be quicker and can lead to flames in the cavity. Make sure, that the oven door is closed during such kind of processes. Please control the baking or cooking process carefully. Open the door very gentle and only if necessary.

ENERGY EFFICIENCY ACCORDING TO EN 60350-1

Please note the following information:

1. The measurement is carried out in the “ECO” mode to determine the data regarding the forced air mode and the label-class
2. The measurement is carried out in the “Top & Bottom Heating” mode to determine the data regarding the conventional mode
3. During the measurement only the necessary accessory is in the cavity.All other parts have to be removed
4. The oven is installed as described in the installation guide and placed in the middle of the cabinet
5. It is necessary for the measurement to close the door like in the household, even when the cable disturbs the sealing function of the gasket during the measurement. To make sure, that there are no negative effects regarding the disturbed sealing due to the energy data, it is necessary to close the door carefully during the measurement. It is may be required to use a tool to guaranty the sealing of the gasket like in the household, where no cable disturbs the sealing function.
6. The determination of the cavity volume carried out for the usage “Defrost” as described on page 14. To ensure an efficient use of the oven, all accessories including side-racks are removed.

DATASHEET (EU 65/2014 & EU 66/2014)

TOF600SS	
No of Cavities	1
